

SEE WHAT IS IN THE WAY

Before you enter. While you manage the trade. Before price reaches the next obstacle.

THE PROBLEM A trade can look clear until price reaches a level you did not notice. GP Confluence Scanner brings Fib, structure, profile, average-price and key market levels into one chart view so you can check the road ahead before you commit risk.

Confirm your own trade ideas

Use the generated support/resistance and confluence levels as confirmation for the strategy you already trade.

Improve target awareness

Know where important reaction areas sit before price reaches them during an open trade.

See roadblocks before entry

Check whether the path to your target is running straight into a strong opposing level.

7-day trial on first launch

Download MT4 or MT5, attach it to the chart and try the indicator. Purchase is handled inside the indicator.

One scanner. Several independent ways to verify a level.

Control	What it does	Practical use
Fibonacci	Golden Pocket plus 38.2 / 50 / 61.8 / 65 / 78.6 / 88.6 and configurable Fib logic.	Find where independent swing relationships cluster.
D/W/M	Daily, Weekly and Monthly opens, highs and lows.	See major time-based references around price.
S/R	MN1, W1, D1 and H4 support/resistance.	Separate higher-timeframe reaction levels from the Fib map.
Pivots	Daily, Weekly and Monthly pivots.	Independent higher-timeframe reference levels.
VP / TPO	POC, VAH, VAL and profile nodes.	Compare Fib/structure zones with price-volume and time-at-price references.
VWAP	Current/previous D/W/M VWAP values.	Check where price is trading relative to average-price references.
EMA / SMA	Configurable moving-average periods and timeframes.	Use only the averages that matter to your process.
OB / FVG	OB -> OB+BOS -> OB+BOS+FVG plus standalone FVG display.	Distinguish a base OB from one with confirmed structure and imbalance.
BOS / CHoCH	Latest and previous structure event per selected timeframe.	Read current structure without losing the immediately preceding event.

Three scan workflows

GP SCAN Golden Pocket/Fib-led zones first, then the enabled confluence is measured around them.	AW SCAN Deeper all-leg Fibonacci scanning for broader measured relationships across confirmed swings.
STRUCT FVG/structure-first scanning when you do not want Golden Pocket to be compulsory.	AUTO OPTIONS A saved source-selection panel for the levels you want available around current price.

FIB GEO - geometry before guesswork

FIB GEO is the built-in market-geometry engine on the current chart timeframe. It selects structure from force first, then uses Fibonacci as validation rather than moving anchors to manufacture a fit.

1. Selects the strongest qualified impulse range d.
2. Expands that structure to e and f using confirmed swing points.
3. Compares the 50% centres to identify symmetry, expansion, contraction or transition.
4. Validates d against 38.2 / 50 / 61.8 milestones after the geometry is selected.
5. Can add VOID / EXH context relative to the next meaningful opposing grid zone.

More than a scanner

Built-in drawing, measurement and analysis tools

MT4

MT5

Easy Fib Drawing

Draw Fib ranges quickly and cleanly on the chart.

Fixed Volume Profiles

Build fixed volume profiles on each selected Fib and show POC, VAH and VAL.

Multiple Fib Channels

Create and manage multiple 3-point Fib channels on the chart.

AW Market Geometry

Measured structure, symmetry, expansion and contraction.

EXT

Extension target analysis and target clusters.

ABC / DiNapoli

COP, OP and XOP objective tools.

Fib Time

Time-based Fib analysis.

On-chart Labels and Zones

Direct visual output for easier decision support.

Why traders like this

- 👁 Scanner and manual tools in one place
- ⚡ Faster than switching between separate indicators
- 📊 Lets you compare price structure and volume directly
- 📈 Makes Fib analysis more structured
- ✅ Helps plan entries, exits and targets more clearly

Evidence & logs

- 📄 Fib outcome logs
- 🔄 AW evidence logs
- 📄 CSV output for review and improvement
- ⚙ AI-ready historical evidence for refining results

“

The manual tools turn analysis into a complete workflow — from structure, to volume, to precise targets.

More control

Deeper analysis

A complete workflow

MORE THAN A SCANNER: Manual Fib + fixed-range profile, multiple 3-point Fib Channels, AW extension targets, DiNapoli COP/OP/XOP, Fib Time, OB/FVG panels and multi-timeframe BOS/CHoCH are all built into the same chart workflow.

Use it beside your strategy - not instead of it

Entry confirmation Your setup says BUY. The scanner can show whether that entry is sitting on meaningful support or directly under resistance.	Trade filter A technically valid setup may still be poor if a major opposing level sits only a short distance away.
Target planning Map likely roadblocks before choosing a target instead of discovering them after the trade is open.	Exit context When price reaches stacked opposing confluence, you have better information for managing the position according to your own rules.

DOWNLOAD -> TRY -> DECIDE The website does not take payment. Download the compiled MT4 or MT5 indicator. The 7-day trial starts when it first opens. Registration, licence selection and payment are handled inside GP Confluence Scanner.

Why the product is different

- It keeps source provenance so a zone is not just a mystery score.
- It lets you show or hide the confluence families you actually care about.
- It combines scanning and manual analysis in the same chart workspace.
- The levels it generates can confirm your own trade ideas rather than forcing you into a separate strategy.
